

Technical Analysis – Daily FBM KLCI

| Date | Open | High | Low | Close | Vol. |
|-----------|----------|----------|----------|-----------|-----------|
| 3/5/2001 | 1,344.24 | 1,347.54 | 1,340.26 | 1,346.895 | 771.1 mil |
| 30/4/2010 | 1,338.32 | 1,348.15 | 1,338.32 | 1,346.38 | 889.0 mil |

Upside gap remained unfilled

Market Commentary :

Dampened by news of a criminal probe into Goldman Sachs, DJIA had on 30/4/2010 lost 158.71 points to close at 11,008.61.

The triple-digit loss in Wall Street sent a negative signal to Bursa Malaysia in the opening bell on 3/5/2010, FBM KLCI fell to a day low of 1,340.26 as some traders chose to take a portion of their winning trades. However, weak follow through selling pressure in area of **1,340.26** prompted light renewed buying interests to roll in, this lifted stock index to a day high of **1,347.54** before settled at **1,346.89**.

The single-digit **rise** of **0.51** points in FBM KLCI was attributed to **buying** pressure in blue-chip counters such as **Bursa** (up RM0.08), **IJM** (up RM0.08), **Genting** (up RM0.16), **KLK** (up RM0.08) and **HL Bank** (up RM0.04).

What was the chart saying

All information, views and advice are given in good faith but without legal responsibility. Mercury Securities Sdn. Bhd. or companies or individuals connected with it may have used research material before publication and may have positions in or may be by materially interested in any stocks in the markets mentioned.

We saw supportive buying in area of 1,340 yesterday (3/5/2010), and it was a little surprise to see the non-readiness on the part of market to go below 1,340 level on immediate basis given the triple-digit loss in Wall Street. The upside gap created on 30/4/2010 remained unfilled on 3/5/2010, this probably explained why many traders were not in a hurry to reverse their buying decision on 30/4/2010. The gapped up scenario basically suggested the urgency on the part of traders to acquire stocks, **what was so urgent that prompted those traders to establish positions on 30/4/2010 ?** It was believed to be market rebound from a level near to 1,320 to close above 1,330 level with a near day high scenario on 28/4/2010, and this was subsequently supported by another near day high close on 29/4/2010. The game play witnessed on 28/4/2010 and 29/4/2010 indicated that there were certain traders ready to play a supporting role in keeping the market afloat.

Furthermore, the stock index was earlier expected to be consolidating its position above 1,330 level plus a waiting timing to go upward after gathered the initial ignition fire powder to go into 1,340 zone on 26/4/2010.

An inside bar pattern occurred on 3/5/2010, this reflected a balance between buyers and sellers following the sharp upward move on 30/4/2010. Market volume on 3/5/2010 was low with sellers not taking the chance to push down the market on an aggressive side even though many traders/investors still seen wary about the potential market's upward strength.

For a decisive upside breakout, these market players need to be convinced of the value in their buying price for new stock positions. And, it would be advisable for [market to take a pause between 1,337 and 1,347 in next 2 days in neutralizing the negativity created on 28/4/2010.](#)

As we had said in our earlier market reports, the small trading range from 19/4/2010 to 27/4/2010 implied that bears were seen not hesitating to sell down on negative news and bulls were only expecting the present market weak market scenario to do a minor pull back before resuming its upward move. Yesterday, bears may have won the battle over the bulls; but, the rebound from day low to climb back up into 1,330 zone seemed to have suggested that bulls had not given up of what they believed in the market and were seen prepared to keep the stock index above 1,330 level. **So, did this market game play on 28/4/2010 ring a bell ?** Yes, of course.

Market broke below 1,330 level on 19/4/2010 and crossed back up above 1,330 level on 20/4/2010, **what can be said about that ?** The cross back up into 1,330 level on 20/4/2010 was certainly a cheer as it indicated the significance of 1,330 level in the eyes of bulls even though the bulls were unable to find the additional "sweetener" to jump start a greater market buying interest to stay supportive above 1,330 level from 8/4/2010 to 16/4/2010.

Certain traders may be seen be working in "keeping" market stability above 1,330 level. Still, should 1,330 level fail to provide the necessary support, this market would then likely be looking at next support between 1,310 and 1,320 level.

What were the strong hands doing

A check of internal market strength on 3/5/2010 showed that buying strength ***weakened*** with strong hand(s) seen ***disposing a portion of buying positions***, this brought the number of stock positions established between 23/3/2010 and 3/5/2010 (inclusive dates) down to ***75%*** from ***83%*** (23/3/2010 – 30/4/2010) of what was sold from 12/3/2010 to 22/3/2010.

Conclusion : The short term and medium term market outlooks were still favourable. Stock index would be seen losing its momentum if market were to break below 1,330

level again The analysis of overall daily market action(s) on 3/5/2010 revealed that buying power(s) was weaker compared to selling pressure(s), FBM KLCI would thus likely to trade below 1,340.26 after making attempt to go higher than 1,347.54.
