

# Rimbunan Sawit (5113)

## Sustained Upside Momentum

### Technical Highlights

The stock found solid support at RM0.215 during its recent consolidation phase following a 52-week high. With renewed buying interest, it managed to break through the pennant pattern, marking a key technical breakout. Post-breakout, the sustained buying momentum had kept the stock trading above all its EMA lines. Notably, the formation of a Marabozu candle last Friday reinforces the continuation of its upward trend.

Momentum indicators are also indicating a bullish outlook. The RSI is sharply trending upwards, nearing overbought territory, which suggests persistent buying pressure. Meanwhile, the upward-pointing MACD and the 20-day EMA line confirm the short-term bullishness of the stock.

An ideal entry point could be within the RM0.240 to RM0.250 range. With current momentum, the stock looks poised to test its first resistance at RM0.280, its 52-week high. A successful breach of this level may strengthen the stock's upward movement, with the next resistance target set at RM0.330. However, a drop below the RM0.235 support level could suggest a return to the consolidation phase.

**Entry** – RM0.240 – RM0.250  
**Stop Loss** – RM0.215  
**Target Price** – RM0.280 – RM0.330

### Technical

<b>Resistance 1 (RM)</b>	0.280

## More Upside on the Play?

### Technical Highlights

The stock's consistent momentum propelled it into a bullish uptrend toward its 52-week high in early July. However, a series of downward corrections marked the beginning of a consolidation phase. This consolidation appeared short-lived as the stock regained buying interest. Last Friday, a surge in buying strength drove the stock upward, breaking through the pennant pattern. This breakout has positioned the stock above all its EMA lines, indicating positive upward momentum ahead.

Momentum indicators further reinforce this bullish perspective. The RSI has shown a significant upward trend after a period of steady movement, suggesting a resurgence in buying interest. Meanwhile, after months of neutral activity, the MACD has finally shifted upward, confirming the stock's bullish trajectory.

An ideal entry point lies between RM1.92 and RM1.95. The first resistance to monitor is RM2.01. If the stock successfully breaks through this level, the next target will be RM2.12. Conversely, a drop below RM1.91 could signal the start of a consolidation phase.

- Entry** – RM1.92 – RM1.95
- Stop Loss** – RM1.81
- Target Price** – RM2.01 – RM2.12

### Technical

<b>Resistance 1 (RM)</b>	2.01
<b>Resistance 2 (RM)</b>	2.12
<b>Support 1 (RM)</b>	1.91
<b>Support 2 (RM)</b>	1.80
<b>MACD</b>	Positive
<b>RSI</b>	Positive

### Stock Information

<b>Last Close (RM)</b>	1.95
<b>52-week High (RM)</b>	2.17
<b>52-week Low (RM)</b>	1.29

### Company Profile

Kerjaya Prospek Group Berhad is a Malaysian based company principally engages in construction of high-end commercial and high-rise residential buildings, property development and manufacturing of lighting and kitchen solutions.

## Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none"><li>- current high less the current low;</li><li>- the absolute value of the current high less the previous close;</li><li>- the absolute value of the current low less the previous close;</li></ul>
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognisable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
