

Edelteq Holdings (0278)

Pattern Breakout With Bullish Marabozu

Technical Highlights

The dwindling in buying interest triggered market correction in the stock since its IPO debut. A falling triangle pattern was formed as the stock continued to consolidate within the range. Recently, the stock displayed a recovery signal as it started to rebound following the establishment of a base at RM0.175 (52-week low). At the closing last Thursday before the long weekend, the renewed buying momentum (1.5x higher than its average 90-days volume) pushed the stock to close significantly higher (+11.4%), forming a Marabozu candle and triggered the triangle pattern breakout. With the pattern breakout, the stock also finally traded above both its 20 and 50-EMA lines.

Momentum indicators are showing positive strength. The RSI is picking up, indicating the built-up of the stock's buying momentum. Meanwhile, the stock's strong buying strength on the last Thursday's trading session also caused the formation of a golden cross in the MACD, signalling bullish sentiment ahead.

For an ideal entry point, it can be placed at RM0.240 to RM0.245. The first resistance level to watch would be at RM0.260. If the stock manages to break this level, the next resistance level to test is at RM0.275. Should both of these levels be cleared, the stock could rally towards to RM0.300. On the downside, if the stock dipped below RM0.215 level, this could indicate a false pattern breakout, with the stock potentially consolidate towards RM0.195 level.

Entry – RM0.240 – RM0.245

Stop Loss – RM0.205

Target Price – RM0.260 – RM0.275 – RM0.300

Technical

Resistance 1 (RM)	0.260
Resistance 2 (RM)	0.275
Support 1 (RM)	0.215
Support 2 (RM)	0.195
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	0.245
52-week High (RM)	0.476
52-week Low (RM)	0.175

Company Profile

Edelteq Holdings Berhad is a company principally involves in offering products and services for semiconductor packaging, inspection, monitoring, automation, and testing process.

YTL Corporation (4677)

Double Bottom Breakout In Action

Technical Highlights

The stock has been on consolidation phase since early April 2024. During this phase, the stock consolidated from its 52-week high (RM3.72) to its 52-week low (RM1.73). Recently, the stock started to recover after establishing a bottom and since then the stock continued to trend upward. At the closing last Thursday, the stock spiked up and breached above the neckline (RM2.20) of the double bottom pattern. With the pattern breakout, we think this could form a stage for the stock to extend its rebounding trajectory in the near term.

Momentum indicators are looking favourable. The RSI is trending upward towards overbought zone, suggesting the stock's sustained buying strength. Meanwhile, the stock's short-term bullish outlook is backed by the recent exhibition of a golden cross in the MACD.

A strategic entry opportunity lies within the range of RM2.25 to RM2.27. The first resistance to watch is RM2.37, and a breakout above this level could see the stock rally toward RM2.49. Conversely, a dip below RM2.14 could signal a false pattern breakout, with potential correction toward RM2.00.

Entry – RM2.25 – RM2.27
Stop Loss – RM2.12
Target Price – RM2.37 – RM2.49

Technical

Resistance 1 (RM)	2.37
Resistance 2 (RM)	2.49
Support 1 (RM)	2.14
Support 2 (RM)	2.00
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	2.27
52-week High (RM)	3.72
52-week Low (RM)	1.73

Company Profile

YTL Corporation Berhad is a conglomerate specializes in utilities, construction, cement and building materials, property development, investment, sewerage, water, environmental and management services.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
