

Infomina (0265)

Sustained Uptrend with Positive Momentum Indicators

Technical Highlights

After a strong rebound from its July low, the stock has sustained its upward trajectory and last closed at RM1.290, firmly above its key support zone. It is now approaching its immediate resistance at RM1.500, which also marks its 52-week high. A decisive breakout above this level would likely accelerate bullish momentum towards the next resistance at RM1.850.

Momentum indicators are supportive of further upside. The RSI remains positive, indicating sustained buying strength, while the MACD is in positive territory, confirming an underlying bullish bias and signaling that momentum is intact.

For entry, accumulation is favored between RM1.090 and RM1.290, aligning with its current consolidation range. On the downside, RM1.080 serves as the first support, with stronger support at RM0.705. A close below RM0.705 would act as a stop-loss trigger, invalidating the bullish setup.

Entry – RM1.090 – RM1.290
Stop Loss – RM0.705
Target Price – RM1.500 – RM1.850

Technical

Resistance 1 (RM)	1.500
Resistance 2 (RM)	1.850
Support 1 (RM)	1.080
Support 2 (RM)	0.705
MACD	Positive
RSI	Positive

Stock Information

Last Close (RM)	1.290
52-week High (RM)	1.500
52-week Low (RM)	0.685

Company Profile

Infomina Berhad provides information communications technology solutions. The Company provides green technology and security consulting, project management, and managed services. Infomina serves customers worldwide.

YLI Holdings (7014)

Accumulation Opportunity Ahead

Technical Highlights

After rebounding from its May low, the stock has been consolidating within a narrowing range and last closed at RM0.315, near its 20-day EMA. The price is currently holding above its immediate support at RM0.280, with stronger support at RM0.250. A sustained move above RM0.360 would signal a breakout, paving the way towards the next resistance at RM0.445.

Momentum indicators are showing early signs of strength. The RSI remains positive, indicating underlying buying interest, while the MACD is neutral but stabilizing, suggesting that momentum could turn more constructive if buying pressure resumes.

For entry, accumulation is favored between RM0.315 and RM0.320, aligning with its current consolidation band. On the downside, RM0.250 serves as a critical stop-loss level. A decisive breakout above RM0.360 would likely attract further momentum, with upside potential towards RM0.445.

Entry – RM0.315 – RM0.320

Stop Loss – RM0.250

Target Price – RM0.360 – RM0.445

Technical

Resistance 1 (RM)	0.360
Resistance 2 (RM)	0.445
Support 1 (RM)	0.280
Support 2 (RM)	0.250
MACD	Neutral
RSI	Positive

Stock Information

Last Close (RM)	0.315
52-week High (RM)	0.580
52-week Low (RM)	0.255

Company Profile

YLI Holdings BHD is an investment holding company. Through its subsidiaries, the Company manufactures and markets ductile iron pipes and fittings, saddles, manhole covers, and cast iron pipes. YLI also trades UPVC pipes and fittings, manufactures raw materials for foundry use, and invests in property.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
