## Positive Indicators Point to Upside Potential

### Technical Highlights

The stock last closed at RM0.510, slightly above its immediate support zone at RM0.505–0.500. This positioning suggests resilience after rebounding from its recent low of RM0.455, which also marks its 52-week low. The stock is now approaching its immediate resistance at RM0.530, with a further upside potential toward RM0.550 should bullish momentum persist.

Momentum indicators are turning constructive. The RSI is positive, reflecting improving buying strength, while the MACD has crossed into positive territory, signaling a potential continuation of upward momentum.

For entry, accumulation is favored at RM0.510, in line with its current support level. On the downside, a break below RM0.500 would trigger the stop-loss, invalidating the bullish setup. On the upside, the target price is set between RM0.530 and RM0.550. A decisive breakout above RM0.550 could open the path toward retesting its 52-week high at RM0.635.

**Entry** – RM0.510  
**Stop Loss** – RM0.500  
**Target Price** – RM0.530 – RM0.550

#### Technical

Resistance 1 (RM)	0.530
Resistance 2 (RM)	0.550
Support 1 (RM)	0.505
Support 2 (RM)	0.500
MACD	Positive
RSI	Positive

#### Stock Information

Last Close (RM)	0.510
52-week High (RM)	0.635
52-week Low (RM)	0.455

#### Company Profile

AGX Group Berhad is a third-party logistics (3PL) service provider. The Company offers sea and air freight forwarding, aerospace logistics, warehousing, road freight transportation, warehousing, and other related services. AGX Group serves customers worldwide.

## Bullish Momentum Supported by Positive Indicators

### Technical Highlights

The stock last closed at RM0.735, marking a steady recovery from its recent low of RM0.630, which also represents its 52-week low. It is now consolidating above its immediate support at RM0.700, with stronger support seen at RM0.670. On the upside, the next key resistance levels are placed at RM0.780 and RM0.810, with a breakout above RM0.810 likely paving the way for a retest of the broader resistance zone towards its 52-week high of RM0.975.

Momentum indicators are supportive of further strength. The RSI remains positive, reflecting sustained buying interest, while the MACD is in positive territory, confirming the improving momentum and signaling potential continuation of the current uptrend.

For entry, accumulation is favored between RM0.730 and RM0.735, aligning with its current trading range. On the downside, a close below RM0.670 would act as a stop-loss trigger and invalidate the bullish setup. On the upside, the target price is set at RM0.780–RM0.810 in the near term.

**Entry** – RM0.730 – RM0.735  
**Stop Loss** – RM0.670  
**Target Price** – RM0.780 – RM0.810

#### Technical

Resistance 1 (RM)	0.780
Resistance 2 (RM)	0.810
Support 1 (RM)	0.700
Support 2 (RM)	0.670
MACD	Positive
RSI	Positive

#### Stock Information

Last Close (RM)	0.735
52-week High (RM)	0.975
52-week Low (RM)	0.630

#### Company Profile

SDS Group Berhad operates in Malaysia.

## Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none"> <li>- current high less the current low;</li> <li>- the absolute value of the current high less the previous close;</li> <li>- the absolute value of the current low less the previous close;</li> </ul>
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
