Unique Fire Holdings Berhad (0257)

Triangle Pattern Breakout

Technical Highlights

The stock last closed at RM0.440, forming a breakout above its triangle pattern. The stock had formed a series of higher highs since April 2025 to its 52-week high at RM0.515 before retracing to its strong support level at RM0.425. With the recent breakout from its price compression, the price movement presents a bullish bias to the overall outlook of the stock.

Momentum indicators turned bullish, as the RSI rushed upwards above the 50-level and the MACD line crossed above the signal line, indicating build-up strength in momentum. Moreover, the stock had crossed above its 20- and 50-day EMAs, having traded well above its 200-day EMA, reinforcing the current uptrend.

On the upside, the immediate target is RM0.457, with further strength potentially extending towards RM0.480, provided momentum sustains toward prior highs. Conversely, a breach below its key support levels would invalidate the bullish outlook and expose the stock to further downside risk.

Entry – RM0.440 – RM0.445
Stop Loss – RM0.400
Target Price – RM0.457 – RM0.480

Technical	
Resistance 1 (RM)	0.457
Resistance 2 (RM)	0.480
Support 1 (RM)	0.425
Support 2 (RM)	0.408
MACD	Bullish
RSI	Positive

Stock Information	
Last Close (RM)	0.440
52-week High (RM)	0.515
52-week Low (RM)	0.310

Company Profile

Unique Fire Holdings Berhad operates as a holding company. The Company, through its subsidiaries, manufactures, assembles, and distributes active fire protection systems, equipment, and accessories. Unique Fire Holdings serves customers in Malaysia.

FoundPac Group Bhd (5277)

Uptrend Intact Post Long-Term Breakout

Technical Highlights

The stock last closed at RM0.350, as the candle hovers above its first support at RM0.334. Back in late August 2025, the stock had broken out of its long-term trendline as it progressively gained towards its 52-week high at RM0.410. With the current structure, the stock is set to rebound from its support level to reclaim its previous highs.

Momentum indicators turn bullish, as the MACD line surged above the signal line while the RSI spiked towards the overbought zone. In addition, the stock is on course to cross above its 20-and 50-day EMAs, indicating a strong bullish structure setting up for the short to long-term.

On the upside, the immediate target is RM0.370, with further strength potentially extending towards RM0.390 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Entry – RM0.350– RM0.355
Stop Loss – RM0.315
Target Price – RM0.370 – RM0.390

Technical	
Resistance 1 (RM)	0.370

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: - current high less the current low; - the absolute value of the current high less the previous close; - the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
