Dayang Enterprise Holdings Bhd. (5141)

Resistance Breakout as Uptrend Persists

Technical Highlights

The stock last closed at RM1.790, forming a breakout above its resistance-turned-support at RM1.760 as the stock maintains its uptrend structure. Previously, the stock had broken out of its 17-month trendline around early November. As the stock printed a bullish candle above its first support, the next course of movement is towards its first resistance at RM1.835.

Momentum indicators are mixed, as the RSI nears the overbought zone while the MACD line is yet to cross above the signal line. The former indicates strong buying pressure while the latter indicates momentum is currently building up. Concurrently, the price had crossed above all its EMAs, as the 20-day EMA formed a bullish crossover above its 200-day EMA.

On the upside, the immediate target is RM1.835, with further strength potentially extending towards RM1.868, provided momentum sustains toward prior highs. Conversely, a breach below its key support levels would invalidate the bullish outlook and expose the stock to further downside risk.

Entry – RM1.790 – RM1.795
Stop Loss – RM1.720
Target Price – RM1.835 – RM1.868

Technical	
Resistance 1 (RM)	1.835
Resistance 2 (RM)	1.868
Support 1 (RM)	1.760
Support 2 (RM)	1.724
MACD	Bearish
RSI	Positive

Stock Information	
Last Close (RM)	1.790
52-week High (RM)	2.190
52-week Low (RM)	1.430

Sealink International Bhd (5145)

Trendline Rebound, Temporary Equilibrium Formed

Technical Highlights

The stock last closed at RM0.300, forming a double doji as the market reached an equilibrium upon rebound from its trendline. An open above its previous high in upcoming trading days will indicate a bullish confirmation, with potential to reclaim its previous highs. Previously, the price had rallied to its 52-week high at RM0.375 before making a sharp drop to its trendline. Moving forward, we view the trend structure to remain intact as we wait for the confirmation signal.

Momentum indicators are mixed, as the MACD line is yet to cross above the signal line while the RSI is flat at the 50-level. In terms of trend, the stock's long-term outlook is bullish, having well traded above its 200-day EMA while on course to cross above its 20- and 50-day EMAs.

On the upside, the immediate target is RM0.315, with further strength potentially extending towards RM0.335 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Entry – RM0.300 – RM0.305
Stop Loss – RM0.280
Target Price – RM0.315 – RM0.335

Technical	
Resistance 1 (RM)	0.315
Resistance 2 (RM)	0.335
Support 1 (RM)	0.295
Support 2 (RM)	0.285
MACD	Bearish
RSI	Positive

Stock Information	
Last Close (RM)	0.300
52-week High (RM)	0.375
52-week Low (RM)	0.115

Company Profile

Sealink International Bhd, through its subsidiaries, provides a wide range of shipping services. The Company's services include ship chartering, shipbuilding and repair, and letting of properties.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: - current high less the current low; - the absolute value of the current high less the previous close; - the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
