

Scicom (MSC) Bhd (0099)

Moving Through the Uptrend Channel

Technical Highlights

The stock last closed at RM1.550, holding to its first support at RM1.510. During the second half of 2025, the stock formed a breakout above its triangle pattern. Subsequently, the support level played as a key resistance level prior to its breakout in January 2026. The price had formed a rebound from its uptrend channel, indicating continuation of its uptrend structure.

Momentum indicators are still mixed, as the leading RSI mildly rises towards the overbought zone, while the lagging MACD line is yet to cross above the signal line. The stock had maintained well above its 200-day EMA, indicating overall bullish trend in the long term. In addition, the price had recently cross above its 20- and 50-day EMAs, confirming a positive trend in the near to medium term.

On the upside, the immediate target is RM1.600, with further strength potentially extending towards RM1.749 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Entry – RM1.550 – RM1.555

Stop Loss – RM1.470

Target Price – RM1.600 – RM1.749

Technical

Resistance 1 (RM)	1.600
Resistance 2 (RM)	1.749
Support 1 (RM)	1.510
Support 2 (RM)	1.474
MACD	Bearish
RSI	Positive

Stock Information

Last Close (RM)	1.550
52-week High (RM)	1.750
52-week Low (RM)	0.675

Company Profile

Scicom (MSC) Bhd offers customer service outsourcing services. The Company operates customer call centers.

GDEX Bhd (0078)

Critical Trendline Broken

Technical Highlights

The stock last closed at RM0.145 to stage a breakout above its nine-year critical trendline. This signals a bullish trend reversal in the long term, with further strength providing a more solid base. As of last close, the price steadies at its first support level at RM0.140, with its previous trendline acting as the broader support.

Momentum indicators are bullish, as the RSI rises above the 50-level, while the MACD line crosses above the signal line. The price had recently cross above its 200-day EMA, indicating a bullish outlook in the long term. Alongside that, the stock had crossed above its 20- and 50-day EMAs, with its 50-day EMA forming a golden crossover to reinforce the bullish outlook of the stock.

On the upside, the immediate target is RM0.150, with further strength potentially extending towards RM0.160 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Entry – RM0.145 – RM0.147

Stop Loss – RM0.132

Target Price – RM0.150 – RM0.160

Technical

Resistance 1 (RM)	0.150
Resistance 2 (RM)	0.160
Support 1 (RM)	0.140
Support 2 (RM)	0.135
MACD	Bullish
RSI	Positive

Stock Information

Last Close (RM)	0.145
52-week High (RM)	0.200
52-week Low (RM)	0.085

Company Profile

GDEX Bhd offers logistic services. The Company offers domestic and international carrier, warehousing, and other logistic solutions. GDEX serves customers in Malaysia.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
