

Insights Analytics Berhad (0376)

Support Rebound, Reclaiming Previous Highs

Technical Highlights

The stock closed at RM1.560, resting at its resistance-turned-support at RM1.450. The stock staged a rebound from its second support level at RM1.280, as the overall trend structure remains bullish. Since listing, the stock had rallied to its all-time high at RM2.000. We anticipate the price to test its resistance levels at RM1.700 and RM1.910 respectively, initiated by the rebound.

Momentum indicators are bullish, as the RSI rises toward the overbought territory, while the lagging MACD line is yet to cross above the signal line. The price is on course to form a breakout above its 20- and 50-day EMAs, while trading well above its 200-day EMA, indicating a strong bullish structure in the long term.

On the upside, the immediate target is RM1.700, with further strength potentially extending towards RM1.910 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Entry – RM1.560 – RM1.570

Stop Loss – RM1.270

Target Price – RM1.700 – RM1.910

Technical

Resistance 1 (RM)	1.700
Resistance 2 (RM)	1.910
Support 1 (RM)	1.450
Support 2 (RM)	1.280
MACD	Bearish
RSI	Positive

Stock Information

Last Close (RM)	1.560
52-week High (RM)	2.000
52-week Low (RM)	0.620

Company Profile

Insights Analytics Berhad operates as an intelligent asset management company. The Company offers end-to-end tools and digital platform for water management, hotel maintenance, road asset monitoring, construction site operations, and streamline fleet coordination. Insights Analytics serves customers in Malaysia.

Go Hub Capital Bhd (0311)

Uptrend Solid, Resistance Broken

Technical Highlights

The stock closed at RM0.995, right at its resistance-turned-support. Previously, the stock had rallied from its 52-week low at RM0.450 before making a steep correction around RM0.800. Consequently, the price had made a rebound to its current level, indicating sustained trend structure from its trend reversal back in January 2026.

Momentum indicators turned bullish, as the RSI nears the overbought territory and the MACD line crossed above the signal line, indicating strong momentum build-up. Notably, the stock has been trading well above all of its EMAs, reinforcing the bullish trend outlook in the near to long term.

On the upside, the immediate target is RM1.060, with further strength potentially extending towards RM1.130 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Entry – RM0.995 – RM0.998

Stop Loss – RM0.925

Target Price – RM1.060 – RM1.130

Technical

Resistance 1 (RM)	1.060
Resistance 2 (RM)	1.130
Support 1 (RM)	0.995
Support 2 (RM)	0.930
MACD	Bullish
RSI	Positive

Stock Information

Last Close (RM)	0.995
52-week High (RM)	1.050
52-week Low (RM)	0.450

Company Profile

Go Hub Capital Bhd provides transportation IT solutions. The Company offers development and integration of bus and rail segments, maintenance, support, terminal management, centralized ticketing, automated fare collection, and bus operating system. Go Hub Capital serves public transportation industry in Southeast Asia.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
