## Symmetrical Triangle Pattern Formed

### Technical Highlights

The stock last closed at RM0.295, forming a symmetrical triangle pattern that reflects ongoing price compression. Since December 2025, the stock has formed a series of higher highs, reaching its 52-week high at RM0.340 before retracing to its strong support level at RM0.270. The narrowing price structure suggests a buildup in momentum, with the symmetrical triangle indicating a potential continuation pattern. A breakout from this consolidation phase would signal a bullish bias, likely paving the way for a resumption of the prior uptrend.

Momentum indicators are mixed, as the leading RSI is rising toward the overbought territory, while the MACD line is yet to cross above the signal line. The price also remains firmly holds above the 200-day EMA, as it tests its 20- and 50-day EMAs as a dynamic resistance.

On the upside, the immediate target is RM0.315, with further strength potentially extending towards RM0.335 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

**Entry** – RM0.295 – RM0.300

**Stop Loss** – RM0.265

**Target Price** – RM0.315 – RM0.335

### Technical

<b>Resistance 1 (RM)</b>	0.315
<b>Resistance 2 (RM)</b>	0.335
<b>Support 1 (RM)</b>	0.285
<b>Support 2 (RM)</b>	0.270
<b>MACD</b>	Neutral
<b>RSI</b>	Bullish

## Monitor for Breakout Above Consolidation Range

### Technical Highlights

The stock closed at RM1.750, rebounding from its first support level at RM1.650. The price continues to trade within a consolidation range between RM1.650 and RM1.800 over the past five months. This prolonged sideways movement suggests an accumulation phase following the earlier uptrend. A breakout above the upper boundary at RM1.800 would likely signal a continuation of bullish momentum. The recent formation of a doji candle further reinforces the potential for an impending breakout.

Momentum indicators are bullish, as the RSI steadily rises toward the overbought zone, while the MACD line continues to move above the signal line. Moreover, the current price movement sets the stage for a potential buy signal in the near term as the latest candle is on the verge of crossing above its fast-moving EMAs. The price had also been maintaining above its 200-day EMA, indicating a bullish outlook remains steadfast in the long term.

On the upside, the immediate target is RM1.875, with further strength potentially extending towards RM2.000 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

**Entry** – RM1.750 – RM1.800

**Stop Loss** – RM1.575

**Target Price** – RM1.875 – RM2.000

### Technical

<b>Resistance 1 (RM)</b>	1.875
<b>Resistance 2 (RM)</b>	2.000
<b>Support 1 (RM)</b>	1.650
<b>Support 2 (RM)</b>	1.580
<b>MACD</b>	Bullish
<b>RSI</b>	Bullish

### Stock Information

<b>Last Close (RM)</b>	1.750
<b>52-week High (RM)</b>	2.060
<b>52-week Low (RM)</b>	0.370

### Company Profile

Ranhill Utilities Berhad operates a water utility network. The Company offers water supply, non-revenue, waste water treatment, and clean energy services. Ranhill Utilities serves customers in Malaysia.

## Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none"><li>- current high less the current low;</li><li>- the absolute value of the current high less the previous close;</li><li>- the absolute value of the current low less the previous close;</li></ul>
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
