

Inari Amertron Berhad (0166)

Breakout Above 2-Month Consolidation Phase

Technical Highlights

The stock closed at RM1.650, rebounding from its first support level at RM1.390. The price continues to trade within a consolidation range between RM1.205 and RM1.525 over the past two months. This sideways movement suggests an accumulation phase following the earlier uptrend. The successful breakout above the upper boundary at RM1.525, further reinforces the strengthening price structure. Overall, the structure suggests improving bullish sentiment with rising buying interest in the near term.

Momentum indicators are bullish, as the RSI steadily rises toward the overbought zone, while the MACD line continue to move above the signal line. Although the price is still trading below its 200-day EMA, suggesting that the broader trend has yet to fully turn bullish, recent price action is turning more constructive, with the latest candle crossing above its short-term EMAs, indicating a potential near-term buy signal and improving upside momentum.

On the upside, the immediate target is RM1.770, with further strength potentially extending towards RM1.890 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Entry – RM1.650 – RM1.655

Stop Loss – RM1.265

Target Price – RM1.770 – RM1.890

Technical

Resistance 1 (RM)	1.770
Resistance 2 (RM)	1.890

Support 2 (RM)	1.270
MACD	Bullish
RSI	Bullish

Stock Information

Last Close (RM)	1.650
52-week High (RM)	2.670
52-week Low (RM)	1.210

Company Profile

Inari Amertron Berhad is a Malaysia-based technology company primarily involved in outsourced semiconductor assembly and test (OSAT) services, focusing on radio frequency (RF) components and serving global clients in the electronics industry. It operates manufacturing facilities mainly in Malaysia and has established long-term partnerships with major multinational customers.

JF Technology Berhad (0146)

Clear Breakout Above 5-Month Downtrend Line

Technical Highlights

The stock closed at RM0.505, successfully breaking 5-month downtrend line formed between from early-November 2025 to early-April 2026. Prior to the breakout, the price had been consolidating within a tightening range, forming a well-defined downtrend structure. Such a setup is typically considered a bullish continuation pattern once a breakout occurs. This move reflects renewed buying interest and suggests that the price may continue trending higher, supporting a longer-term bullish outlook.

Momentum indicators are bullish, as the RSI surged towards the overbought zone, while the MACD line cross above the signal line, indicating a surge in momentum. The price is trading firmly above the 20-day, 50-day and 200-day EMAs, indicating strong bullish momentum across the short, medium and long-term trend.

On the upside, the immediate target is RM0.535, with further strength potentially extending towards RM0.580 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Entry – RM0.505 – RM0.510

Stop Loss – RM0.440

Target Price – RM0.535 – RM0.580

Technical

Resistance 1 (RM)	0.535

Support 1 (RM)	0.470
Support 2 (RM)	0.445
MACD	Bullish
RSI	Bullish

Stock Information

Last Close (RM)	0.505
52-week High (RM)	0.675
52-week Low (RM)	0.385

Company Profile

JF Technology Berhad is a Malaysian company that designs and manufactures test contacting solutions such as test sockets and probes used in semiconductor testing processes. Its products are exported globally, supporting integrated circuit testing for various applications including automotive, industrial, and consumer electronics.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
