

Oasis Home Berhad (0357)

Trendline Breakout Signals New Leg Up

OHM MK	Last Close:	0.400	52-week High:	0.400	52-week Low:	0.260
---------------	--------------------	-------	----------------------	-------	---------------------	-------

Entry Price	0.395 – 0.400	Stop Loss	0.315	Target Price	0.415 – 0.460
Resistance 1	0.415	Support 1	0.345	RSI	Bullish
Resistance 2	0.460	Support 2	0.325	MACD	Positive

Technical Highlights

The stock closed at RM0.400, breaking above its 3-month descending trendline at RM0.384, signalling a shift in near-term momentum after a period of consolidation. This breakout also coincides with the stock trading above its resistance-became-support level at RM0.344, reinforcing the structural improvement in price action. The broader trend remains constructive, with price continuing to track within a bullish ascending parallel channel since May 2025, keeping the stock on a higher-high, higher-low trajectory.

Momentum indicators are turning increasingly favourable. The RSI remains firmly in positive territory at 65.35, reflecting solid buying momentum and sustained demand. Meanwhile, the MACD line has crossed above the signal line, indicating that bullish momentum remains intact. Adding to the positive setup, price is now trading above all its key EMAs, reinforcing the strength of the uptrend and pointing to a firmly positive technical outlook.

On the upside, the immediate target is RM0.415, with further strength potentially extending towards RM0.460 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Company Profile

Oasis Home Holding Berhad operates as a holding company. The Company, through its subsidiaries, markets and sells a wide range of consumer lifestyle products, including home and living, beauty, personal care, and wellness products through live commerce, mobile application, and website. Oasis Home Holding serves customers in Malaysia.

Mentiga Corporation Berhad (5223)

Early Breakout, Awaiting Volume Follow-Through

MENT MK	Last Close:	0.780	52-week High:	0.890	52-week Low:	0.430
----------------	--------------------	-------	----------------------	-------	---------------------	-------

Entry Price	0.775 – 0.780	Stop Loss	0.525	Target Price	0.900 – 1.100
Resistance 1	0.900	Support 1	0.680	RSI	Bullish
Resistance 2	1.100	Support 2	0.535	MACD	Positive

Technical Highlights

The stock closed at RM0.780, attempting a breakout from its 3-month triangle chart pattern. This move above the upper boundary signals an early attempt to resolve the multi-month consolidation to the upside, with the stock still holding comfortably above its 3-month ascending trendline and support level at RM0.680. A sustained close above the descending trendline would confirm the breakout, reinforcing the bullish resolution of the triangle pattern.

Momentum indicators are showing early signs of improvement. The RSI is rising and currently sits at 63.34, indicating steady underlying demand while still leaving room for further upside. Meanwhile, the MACD has just crossed above the signal line, suggesting downside pressure is fading and bullish momentum is beginning to build. From a trend perspective, the price has recently reclaimed the 20-day EMA, reinforcing a strengthening short-term structure, with the stock now trading above all key EMAs.

On the upside, the immediate target is RM0.900, with further strength potentially extending towards RM1.100 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Company Profile

Mentiga Corporation Berhad extracts and trades timber and has operation in property development and construction. Through its subsidiaries, the Company operates oil palm plantations, leases properties, and provides advisory services to oil palm plantations.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: <ul style="list-style-type: none">- current high less the current low;- the absolute value of the current high less the previous close;- the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
