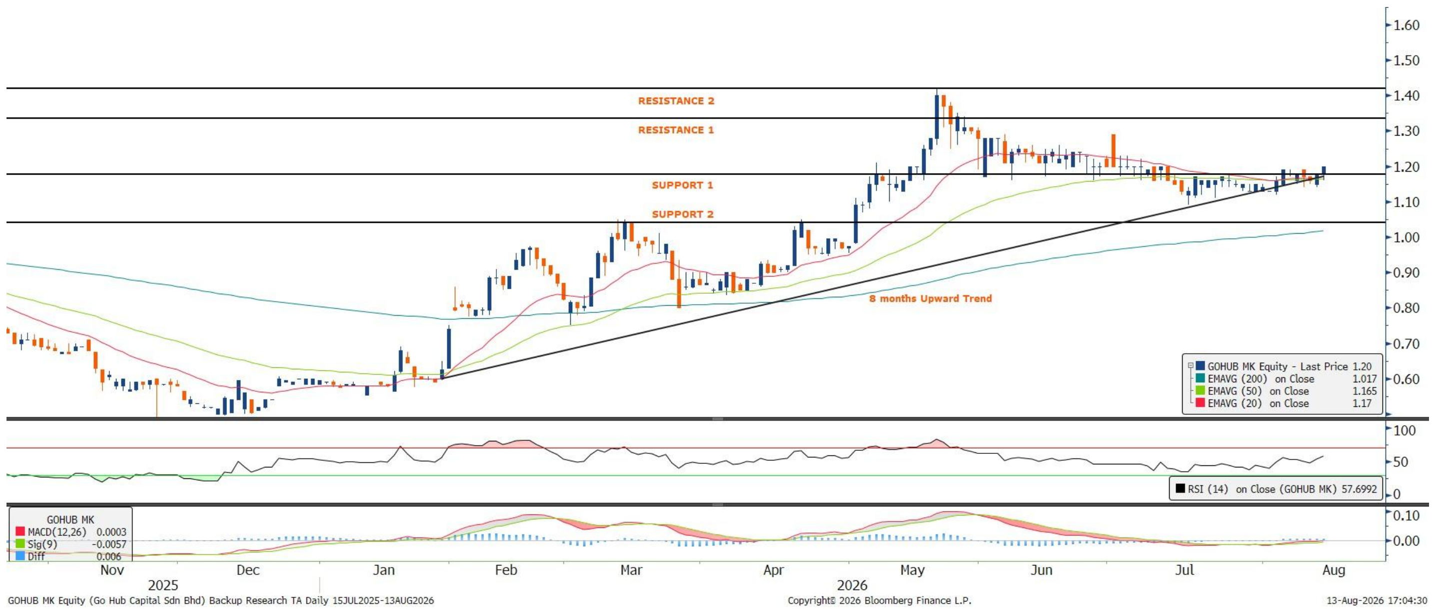
Go Hub Capital Bhd (0311)

Uptrend Remains Intact Above Key Support

GOHUB MK	Last Close	1.200	52w High	1.420	52w Low	0.450



Entry Price	1.200 – 1.205	**Stop Loss**	1.035	**Target Price**	1.335 – 1.400
Resistance 1	1.335	**Support 1**	1.175	**RSI**	Bullish
Resistance 2	1.400	**Support 2**	1.040	**MACD**	Positive

Technical Highlights

The stock last closed at RM1.200, continuing to trade within the 8-month upward trend. The stock is holding around Support 1 at RM1.175, with a sustained move above this level supporting further upside towards the immediate resistance at RM1.335.

The RSI stands at 57.70, remaining in neutral territory with a positive bias. MACD remains positive and above the signal line, suggesting improving momentum. The stock remains above the 20-day EMA at RM1.170, 50-day EMA at RM1.165 and 200-day EMA at RM1.017, maintaining its bullish trend.

On the upside, the immediate target is RM1.335, with further strength potentially extending towards RM1.400 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Company Profile

Go Hub Capital Bhd provides transportation IT solutions. The Company offers development and integration of bus and rail segments, maintenance, support, terminal management, centralized ticketing, automated fare collection, and bus operating system. Go Hub Capital serves public transportation industry in Southeast Asia.

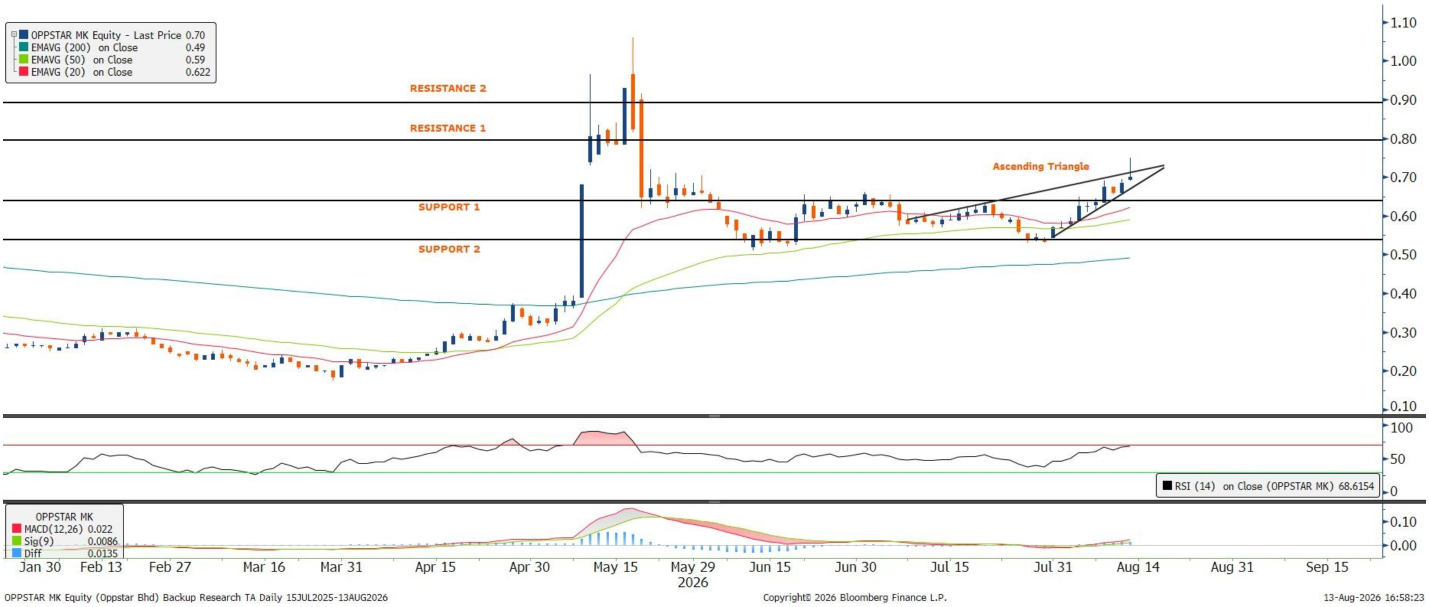
Oppstar Bhd (0275)

Momentum Builds Ahead of Ascending Triangle Breakout

OPPSTAR MK	Last Close	0.710	52w High	1.060	52w Low	0.175



Entry Price	0.700 – 0.695	**Stop Loss**	0.530	**Target Price**	0.795– 0.890
Resistance 1	0.795	**Support 1**	0.645	**RSI**	Bullish
Resistance 2	0.890	**Support 2**	0.535	**MACD**	Positive

Technical Highlights

The stock last closed at RM0.700, continuing to trade within an ascending triangle pattern formed since late July 2026. The stock is approaching the immediate resistance at RM0.795, with a breakout potentially signalling further upside.

The RSI stands at 68.65, indicating strong buying interest but nearing overbought territory. MACD remains positive and above the signal line, supporting the bullish momentum. The stock remains above the 20-day EMA at RM0.622, 50-day EMA at RM0.590 and 200-day EMA at RM0.490, maintaining its bullish trend.

On the upside, the immediate target is RM0.795, with further strength potentially extending towards RM0.890 should momentum build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Company Profile

Oppstar Berhad operates as a semiconductor company. The Company offers wide spectrum of integrated circuit and electronic system design and manufacturing services. Oppstar serves telecommunication, consumer electronics, industrial electronics, and automotive industries worldwide.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: - current high less the current low; - the absolute value of the current high less the previous close; - the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
