

Malayan Flour Mills Berhad (3662)

Bullish Pennant Signals Bullish Continuation

MFL MK	Last Close:	0.705	52-week High:	0.715	52-week Low:	0.535
--------	-------------	-------	---------------	-------	--------------	-------

Entry Price	0.705 – 0.710	Stop Loss	0.665	Target Price	0.715 – 0.740
Resistance 1	0.715	Support 1	0.690	RSI	Bullish
Resistance 2	0.740	Support 2	0.670	MACD	Positive

Technical Highlights

The stock closed at RM0.705 and is currently forming a bullish pennant pattern, suggesting that the stock may continue its upward movement after a period of consolidation. The stock has also previously broken above its 5-month downtrend line, which indicates that the overall trend is becoming more positive. A breakout above the RM0.715 resistance would confirm the bullish pattern and could push the stock towards the next resistance at RM0.740.

Momentum indicators are showing a constructive outlook. The RSI stands at 71.77, indicating strong buying interest but an overbought condition. Meanwhile, the MACD remains above the signal line, indicating that the underlying positive momentum is still intact. In addition, the price is trading above all its key 20-day, 50-day and 200-day EMAs, reinforcing the strength of the broader uptrend and signalling a cautiously positive technical outlook.

On the upside, the immediate target is RM0.715, with further strength potentially extending towards RM0.740 should momentum continue to build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Company Profile

Malayan Flour Mills Berhad mills and sells wheat flour. The Company, through its subsidiaries, manufactures and sells animal feeds, provides transportation services, and breeds chicks. Malayan Flour Mills also manufactures and sells polypropylene and polyethylene woven bags and operates training and research center.

Lianson Fleet Group Berhad (5255)

7-Month Downtrend Line Breakout, Uptrend Intact

LFG MK	Last Close:	1.570	52-week High:	2.237	52-week Low:	1.350
--------	-------------	-------	---------------	-------	--------------	-------

Entry Price	1.570 – 1.575	Stop Loss	1.405	Target Price	1.610 – 1.780
Resistance 1	1.610	Support 1	1.520	RSI	Bullish
Resistance 2	1.780	Support 2	1.410	MACD	Positive

Technical Highlights

The stock closed at RM1.57, breaking above the 7-month downtrendline that had been keeping the stock under pressure since early February 2026. The breakout is supported by a strong three white soldiers candlestick pattern, showing strong buying interest and improving market sentiment. This suggests that the stock may continue moving higher towards the immediate resistance at RM1.61, followed by RM1.78.

Momentum indicators are showing positive signs of improvement. The RSI has risen to 59.49, indicating strengthening buying momentum while remaining below the overbought zone. Meanwhile, the MACD is bullish, suggesting that upward momentum is building. From a trend perspective, the price has moved above the 20-day EMA, further supporting a strengthening short-term trend, although the 50-day and 200-day EMAs remain above the current price, indicating that the longer-term trend still requires further confirmation.

On the upside, the immediate target is RM1.61, with further strength potentially extending towards RM1.78 should momentum continue to build. Conversely, a breach below its support levels would invalidate the bullish outlook and expose the stock to further downside.

Company Profile

Lianson Fleet Group Bhd provides oilfield services. The Company specializes in offshore marine solutions that support the upstream oil and gas industries. Lianson Fleet Group serves clients in Malaysia and Southeast Asia.

Glossary of commonly used technical terms

Exponential Moving Average (EMA)	An indicator frequently used in technical analysis showing the average value of a security's price over a set period with greater weightage placed on the most recent data points.
Moving Average Convergence Divergence (MACD)	A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A 9-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.
Stochastic	A technical momentum indicator that compares a security's closing price to its price range over a given time period. The indicator's sensitivity to market movements can be reduced by adjusting the time period or by taking a moving average of the result.
Average True Range (ATR)	A measure of volatility whereby the indicator is the greatest of the following: - current high less the current low; - the absolute value of the current high less the previous close; - the absolute value of the current low less the previous close;
Bollinger Band	A band plotted 2 standard deviations away from a simple moving average.
On-Balance Volume (OBV)	A method used in technical analysis to detect momentum, the calculation of which relates volume to price change. OBV provides a running total of volume and shows whether this volume is flowing in or out of a given security.
Support	The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.
Resistance	The price at which a stock or market can trade, but not exceed, for a certain period of time. Often referred to as "resistance level".
Reversal	A change in the direction of a price trend. On a price chart, reversals undergo a recognizable change in the price structure. An uptrend, which is a series of higher highs and higher lows, reverses into a downtrend by changing to a series of lower highs and lower lows. A downtrend, which is a series of lower highs and lower lows, reverses into an uptrend by changing to a series of higher highs and higher lows.
Divergence	When the price of an asset and an indicator, index or other related asset move in opposite directions.
Overbought	In technical analysis, this term describes a situation in which the price of a security has risen to such a degree – usually on high volume – that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.
Oversold	A situation in technical analysis where the price of an asset has fallen to such a degree – usually on high volume – that the oscillator has reached a lower bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors
